

**Forum: Metrology – Trade Facilitator
Request for support**

SYRIA

Core Problem:

Currently, Syria is setting up a Legal Metrology System, and our country needs to get help for developing and establishing this system.

Significance of the problem:

- 1 The National Metrology Standards are not calibrated by International Accredited Laboratories to achieve the traceability of the system.
- 2 There is a great lack of experience of laboratory staff who are working in the field of metrology.

What is needed:

SASMO needs an offer of support:

- 1 From an internationally accredited laboratory for calibrating national standards in order to achieve traceability.
- 2 From an internationally accredited laboratory for training of staff or national trainers in the field of metrology.
- 3 From a consultation body to qualify our national laboratory according to ISO 17025 in order to achieve accreditation.

Contributions:

We can only provide logistical support.

Whom to address:

During the Forum:

Mr Khaled Osman
Engineer and Metrological Director
Syrian Arab Organization for Standardization and Metrology (SASMO),
Ministry of Industry, SYRIA

After the Forum:
